

Technische fiche 2026-2027

General

First of all, thank you for taking the time to review this rider.

The technical requirements are part of the agreement and must be strictly adhered to by the organizer.

We look forward to a good working relationship with the organization and, in the event of a conflict, with the local PA company.

The FUNKY D' planner will contact you (as the organizer) no later than one week before the event or party to make arrangements regarding the setup and takedown of FUNKY D' equipment.

The organization is responsible for ensuring the technician is properly received and shown around the venue.

The organization (Contractor 1) will discuss the points below in advance with the venue owner to avoid any potential disputes later on.

For technical questions, please contact SSL: info@sslrent.be.

Electrical

Please provide one fused 16A, 230V circuit in the control and DJ room.

Control and DJ Room

The organizer must provide a clear space of at least 3 x 2 m. The floor must be flat and clean. This is where the DJ booth and PA rack will be placed.

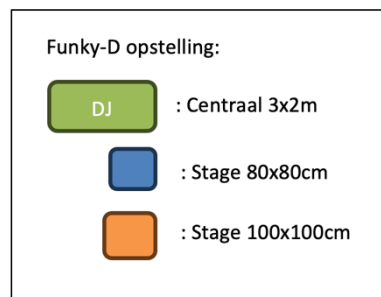

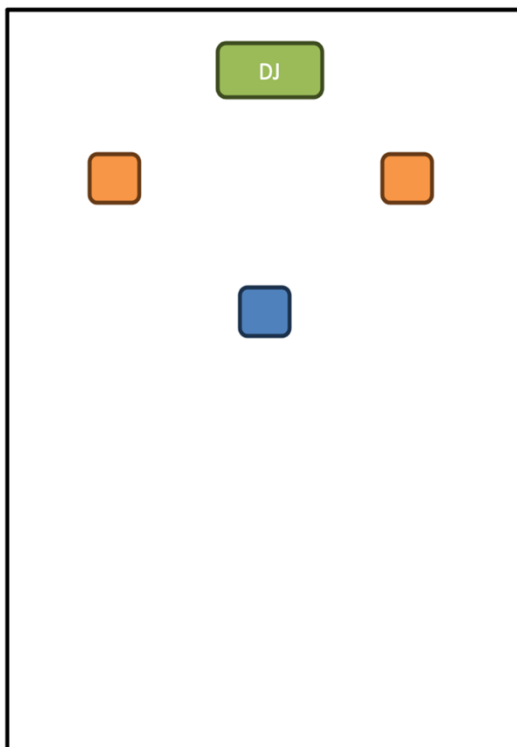

Stage

FUNKY D setup in a hall or on a plaza

Space for the DJ and control room is therefore always required! It is important that the FUNKY DJ can interact with the other band members.

The FUNKY D stages are distributed centrally around the DJ across the dance floor.

Please take the following dimensions into account.

SOUND

Sound System

-As standard, FUNKY D provides its own sound system for events with up to 500 people:

FUNKY D provides a high-quality sound system from d&b audiotechnik (Q-Y series).

The FUNKY D technician will handle all other technical aspects.

-If the ORGANIZATION provides its own sound system for PERFORMANCES with up to 500 PEOPLE, the organizer must take the following into account:

The PA company must provide a high-quality sound system with sufficient headroom, free of interference, and suited to the venue.

A stacked system from d&b audiotechnik (Q/Y/V series) is preferred. FUNKY D is a performance where the musicians usually stand in front of the speakers. As a result, it is not possible to play on just any system. The PA company ensures that sound is evenly distributed across the listening area.

The system must be tested and ready for use by the time the FUNKY technician arrives. The PA company provides a knowledgeable system technician.

Sound Level

FUNKY D strives to maintain a comfortable sound level that takes into account both the enjoyment of the music and applicable noise regulations.

In practice, this means that FUNKY D adheres to an average sound level of 95 dB LAEQ 15', measured on the dance floor.

Lighting Set & FX

FUNKY D provides a small lighting set, which can serve as dance floor lighting.

Additionally, FUNKY D provides 2 sparkulars, a confetti gun, and decorative elements with LED strips.

The client must have clearly agreed in advance with the venue whether or not confetti/streamers may be used. If not, this must be communicated in advance to Joris Minten: 00 32 474 60 14 67
